How It Works

Digital inspections with photos increase trust with your customers. Advisors have an easier time selling work when customers can see what technicians see. Shops using AutoServe1 see an increase in their average repair orders of 22%.

Technician

Performs tablet-based inspections on every vehicle to capture all required repair work.

Advisor

Automatically builds professional looking customer reports with all the inspection findings. Sends out to customer.

Customer

Receives their digital inspection report and reviews it on their computer/phone with or without the advisor, and sends approval.
